INTRODUCTION

The designing of this website included the use of Internet programming languages such as HTML (Hypertext Markup Language) and CSS (Cascading Style Sheet), two of the core languages for building webpages, Html provides structure to the page , CSS provides the layout.

The website includes Sign Up page, Product page, shopping cart and review section which will help the customers to navigate through sections and choose their comfort of products.

The project enabled us to work in group and divide the work equally and efficiently.

Technologies Used

In the creation of this website, we used technologies like HTML(the Hypertext Markup Language) and CSS(Cascading Style Sheets) which are two of the core technologies for building webpages. HTML provides the structure of page, CSS the (visual and aural) layout, along with graphics and scripting.

HTML

HTML gave our project the means to:

- Publish online documents with headings, text, tables, lists, photos,etc.
- Retrieve online information via hypertext links, at the click of a button.
- Design forms for conducting transactions with remote service, for use in searching for information, ordering products, etc.

CSS

CSS is the language for describing the presentation of webpages, including colors, layout and fonts. It allows one to adapt the presentation to different types of devices, such as large screens, small screens and printers. CSS is independent of Html.

CSS gave our project:

- A proper layout and outlook.
- Creation and designing of webpages became easy.
- Images and font styling gave a better output.

FEATURES OF THE WEBPAGE

The webpage is designed to book you ticket or railway reservation.

HOME:

- The home page displays the basic introduction to the website and related products.

Online Reservation:

- Here you make your reservation confirm according to your journey.

Meals:

- To order any given food while your journey.

Holiday Package:

- If any one want to go for any tourist destination then its easy to confirm it from this point.

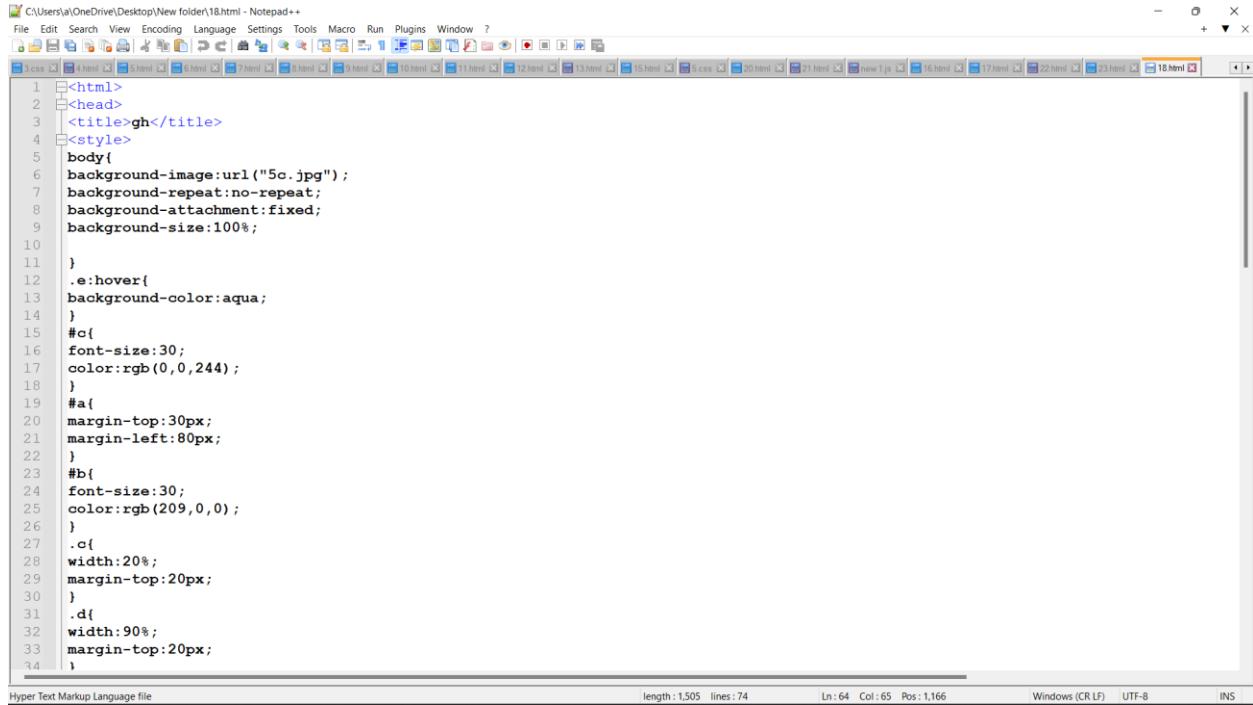

Help Point:

- If anyone have any query or need any facility related to station service.

SCREENSHOTS

➤ Home Page

- The HTML code used:

The screenshot shows a Notepad++ window displaying an HTML file named '18.html'. The code is as follows:

```
1 <html>
2  <head>
3   <title>gh</title>
4  <style>
5   body{
6     background-image:url("5c.jpg");
7     background-repeat:no-repeat;
8     background-attachment:fixed;
9     background-size:100%;
10    }
11   .e:hover{
12     background-color:aqua;
13   }
14   #c{
15     font-size:30;
16     color:rgb(0,0,244);
17   }
18   #a{
19     margin-top:30px;
20     margin-left:80px;
21   }
22   #b{
23     font-size:30;
24     color:rgb(209,0,0);
25   }
26   .c{
27     width:20%;
28     margin-top:20px;
29   }
30   .d{
31     width:90%;
32     margin-top:20px;
33   }
34 }
```

- Image we get:

The screenshot shows a web browser window titled "Railway Reservation". The address bar indicates the file is located at "C:/Users/A/OneDrive/Desktop/New%20folder/10.html". The main content is a form titled "RAILWAY RESERVATION" with a red header containing the text "BOOK YOUR TICKET HERE". The form consists of six input fields arranged in a row: "From" (blue), "To" (blue), "DOB" (blue), "Class" (blue), "Train To Find" (blue), and "Passport Picture" (blue). Below the form is a yellow button labeled "Check Availability".

FLOW OF PROJECT

For the project, we worked in a group of two, and divided the work efficiently and equally.

We tried our best to include all our skills and abilities for this project and work to our full potential.

We divided the work according to the interests and skills of the team members.

The creation of the website included thorough coding and creativity where we put forth our creative minds and developed the project.

INITIATION:

- We firstly, created a rough idea about the basic design of our webpage and it's elements.

PLANNING:

- We planned in the group about the division of work and discussed about interesting ideas.

EXECUTION:

- We executed our part of work thoroughly and designed our respective pages.

MONITORING:

- We took each other's help wherever required and kept monitoring our projects regularly.

CLOSURE:

- We lastly, collectively, merged the codes and created the complete website.

CONCLUSION :

We, together, completed this project successfully and learnt a lot during the course. We improved our technical skills and learnt how to input the creative mind and convert imagination into reality.

It was a great learning of how to design a webpage and also the benefits of working in groups.

The website created can be considered as our one of the successful projects it gave us an idea of the future waiting for us.

REFRENCE :

- W3Schools
- DevDocs
- Freecodecamp
- stackoverflow
